

Excursions

8 May 2026

24th European Transport Congress & 100 years of ÖVG

The technical excursions offered as part of the European Transport Congress provide participants with a unique opportunity to experience innovative mobility solutions first-hand across all modes of transport. From urban public space design to rail, road, and intermodal systems, the program reflects the diversity and integration of today's transport landscape. Participation in the excursions is optional and can be arranged directly on-site during the congress at the designated registration desk. Further details on each excursion, including timing and capacity, will be available at the venue.

“Supergrätzl” Citywalk

The newly opened “Supergrätzl Favoriten” is Vienna’s first superblock and showcases an innovative approach to reducing through-traffic while enhancing urban quality of life. A new traffic organization limits car transit, enabling the redesign of public space with added greenery and improved conditions for social interaction. The excursion highlights both the temporary pilot phase and the now permanently implemented design. Participants will gain insights into the planning and implementation process, as well as the project’s role within the research initiative “Transformatorin,” which explores the scalability of superblocks across Vienna.

Bicycle Tour

highlights of Vienna’s cycling infrastructure

The excursion provides insights into Vienna’s cycling infrastructure through a curated route across key locations in the inner city, including Praterstraße. Along the way, both established and recently implemented measures are highlighted, focusing on infrastructure design, safety, and network connectivity. The tour continues along the Prater Hauptallee, showcasing Vienna’s recreational cycling offer and addressing aspects of corporate mobility. A halfway stop offers an opportunity for networking and refreshments before returning, combining professional exchange with first-hand experience of the city’s cycling environment.

Visit to Wiener Linien

U5 Construction & Pedestrian Flow Simulation Lab & Hybrid Planning

The excursion provides insights into one of the city's most significant public transport expansion projects, focusing on metro development, integration, and pedestrian mobility. Using the construction site at Pilgramgasse and the area near TU Wien as case studies, participants will explore ongoing works and key planning principles of the U2 x U5 project, including accessibility and passenger flow. In addition, the excursion introduces a hybrid, data-driven planning approach by the City Intelligence Lab, showing how citizen input can be translated into real-time 3D models to assess impacts on urban space and mobility.

Vienna Airport

with focus on Critical Infrastructure

The excursion offers an exclusive insight into the operations and management of one of Austria's key transport hubs. With a focus on critical infrastructure, participants will explore how the airport ensures the continuous, safe, and efficient flow of passengers, cargo, and aircraft. The visit highlights essential systems and facilities that keep the airport running smoothly. Participants will gain a detailed understanding of planning, operational challenges, and strategic approaches that safeguard Vienna Airport's functionality, while learning about its role as a cornerstone of regional and international mobility.

Vienna Harbour tour

with MS Eisvogel

The excursion provides a unique perspective on the city's inland port as a central hub of logistics, mobility, and urban development. Participants will explore the Donauhafen and gain insights into its role within the European transport network, including freight handling, storage, and intermodal connections between water, rail, and road. A key highlight of the excursion is the journey on the MS Eisvogel, the Port of Vienna's multifunctional vessel, which allows for a waterside view of port operations and infrastructure.

ASFINAG & ÖBB

Behind-the-scenes of traffic management and logistics

This excursion leads to two of Vienna's most advanced transport infrastructure facilities: the ASFINAG Traffic Management Center in Inzersdorf and the ÖBB Cargo Terminal Wien Süd. It combines insights into motorway traffic management with the operation of a modern intermodal freight terminal. Participants will gain a behind-the-scenes perspective on how traffic flows are monitored and controlled, how modern vehicles and innovative infrastructure communicate with each other and how rail and road logistics are efficiently connected. The visit provides access to areas that are otherwise rarely open to the public and highlights the complexity and innovation of Austria's transport infrastructure.
